## ABSTRACT OF THE DISCLOSURE

A method, system, and apparatus for increasing the the compression of a efficiency and robustness of communication protocol for communication between entities over bandwidth limited communication links. The present invention uses the request-reply nature of communication decompression compression and update to protocols Each communication entity will update its dictionaries. dictionary with a new message as soon as it is known that the other communication entity has access to the message. In one aspect of the present invention, an entity updates a compression/decompression dictionary by updating dictionary with sent messages as soon as a reply arrives from the other entity, and by updating the dictionary with In another aspect of the received messages immediately. present invention, received messages are used to update an entity's decompression dictionary and sent messages are used to update an entity's compression dictionary.
